

I can not sign in or register

if your URL in **Db.php** is well: <http://site.com> can not enter if the URL have the www

To not have that problem with this can add to **.htaccess** the following code:

```
RewriteEngine On

RewriteCond %{HTTP_HOST} ^(www\.yousite\.com) (:80)? [NC]

RewriteRule ^(.*) http://yousite.com/$1 [R=301,L]
```

If you want your site to always be so: yousite.com And if you want it that way: www.yousite.com add this then:

```
RewriteEngine On

RewriteCond %{HTTP_HOST} ^(yousite\.com) (:80)? [NC]

RewriteRule ^(.*) http://www.yousite.com/$1 [R=301,L]
```

Important Do not delete the other lines. Htaccess

If the problem persists, verify that the “mbstring” is enabled
